Phase 6 Features:

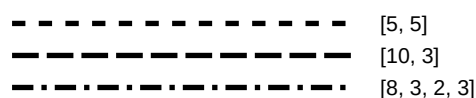

Line Cap Styles:

Line Join Styles:

Dashed Lines (LineDash):

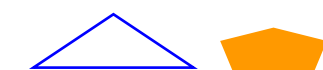

Character Spacing:

Normal spacing (0)

Wide spacing (2)

Very wide (5)

Polygons (autoClose=True):

ClearRectangle:

Advanced Features

1. TextHeight(text, wrapWidth) - Multi-line Height

Text: "This is a long text that will wrap across multiple lines when constrained to a specific width. The TextHeight method calculates
Wrap width: 300 points
Calculated height: 32,4 points

This is a long text that will wrap across multiple lines when constrained to a specific width. The TextHeight method calculates how tall the wrapped text will be.

2. DrawText(text, x, y, width, condense=True) - Horizontal Scaling

Without condense (truncated):

This text is too wide for the box!
With condense=True (scaled to fit):
This text is too wide for the box!

3. Font Properties - Individual Font Settings

Current FontName: Helvetica
Current FontSize: 10
Times 14pt Bold Italic
Back to Helvetica 10pt normal

4. Transformation Methods - Rotate & Translate (NEW!)

Translate(x, y) - Shift coordinate system:

Rotate(angle) - Rotate around current position:

Normal

5. DrawTextBlock - Word-wrap with Alignment (NEW!)

English (Left):

The quick brown fox jumps over the lazy dog.
This demonstrates word-wrapping in a constrained area.
English (Center):

Centered multi-line text with word-wrapping enabled.

English (Right + Truncate):

This is a very long text that will be truncated with ellipsis because it exceeds the maximum height.
Japanese (Center):

日本語テキストのワードラップテストです。複数行にわたって表示されます。

Hebrew (Right):

רומא טסקט. תורוש תשילג תקידבל תירבעב טסקט והז
ןימיל רשוימ תויהל

Arabic (Right):

يجب. هذا نص عربي لاختبار التفاف الكلمات
أن يظهر بشكل صحيح

Rotated 45°

中文旋转

مرحبا

6. Clipping Methods Demo (NEW!)

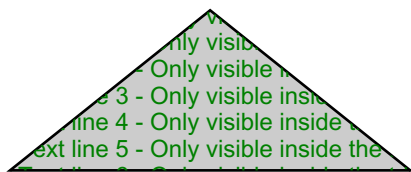

ClipToRectangle - Text clipped to rectangle:

English: Hello World - clipped text ex
中文: 你好世界 - 这段中文文本超出剪
日本語: こんにちは世界 - クリッピン

Clip() function - Returns Self for method chaining:

Clipped via Clip() function call
العربية: مرحبا بالعالم -مق طوع
Also clipped - cut off at edge

ClipToPath(VNSPDFGraphicsPath) - Polygon clipping:

Nested Clipping - Multiple clip regions:

Outer clipping region (200x60)

Inner nested clip - This

All clipping methods now implemented: Clip(), ClipToPath(), ClipToRectangle(), ClipEnd()

7. DrawObject Demo (NEW!)

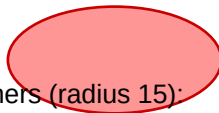

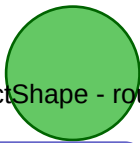

DrawObject renders Object2D shapes (RectShape, OvalShape, etc.)

RectShape - filled rectangle with border:

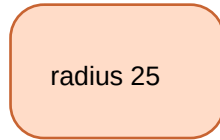

Rotated 45°

OvalShape - circle and ellipse (X,Y is CENTER):

RoundRectShape - rounded corners (radius 15):

radius 25

CurveShape - quadratic bezier curve:

TextShape - styled text with full UTF-8 support:

Hello TextShape!

中文: 你好世界

日本語: こんにちは

한국어: 안녕하세요

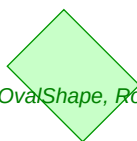

العربية: مرحبا

Rotated 45°

旋转中文 45°

回転テキスト

Group2D - multiple shapes as one unit:

Group rotated 45°

DrawObject supports: RectShape, OvalShape, RoundRectShape, ArcShape, CurveShape, FigureShape, TextShape, PixmapShape, Group2D

8. Brush Demo (VNS Wrapper)

VNSPDFGraphics.Brush supports LinearGradientBrush, RadialGradientBrush, and PictureBrush

LinearGradientBrush - Horizontal gradient (red to blue):

LinearGradientBrush - Diagonal gradient (green to yellow):

LinearGradientBrush - Multi-stop rainbow:

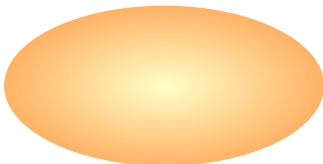

LinearGradientBrush on FillOval:

RadialGradientBrush - Center to edge (white to purple):

RadialGradientBrush on FillOval:

Brush property: LinearGradientBrush, RadialGradientBrush, PictureBrush (Tile/Mirror modes)
