

Bug Test Suite - Geoff Bridges Report

Running on macOS - Testing cross-platform behavior

Test 1: MultiCell Border Rendering (ENHANCED)

Issue: Bottom borders missing on single-line MultiCell with borders=1

Expected: All borders (top, left, right, bottom) should be visible

1a. Single-line MultiCell with border=1:

>>> If BOTTOM border is missing below, the bug exists on this platform <<<

SINGLE LINE TEXT - Check all 4 borders

1b. Reference: What it SHOULD look like (Cell with border=1):

REFERENCE - All 4 borders visible

1c. Side-by-side: MultiCell (LEFT) vs Cell (RIGHT):

MultiCell

Cell (reference)

If left box is missing bottom border, bug confirmed!

1d. Multi-line MultiCell with border=1 (for comparison):

This is a longer text that will wrap to multiple lines to test border rendering on multi-line cells.

Test 2: MultiCell Newline Character Handling

Issue: Explicit newlines (chr(10)) not respected, CRLF not handled

Expected: Three lines with explicit line breaks preserved

2a. MultiCell with explicit newlines:

First line

Second line

Third line

2b. MultiCell with CRLF (Windows-style):

First line

Second line

Third line

Test 3: SplitTextToLines First Character Bug

Issue: For loop starts at 1 instead of 0, missing first character of long words

Expected: Long word should break with ALL characters visible (starting with 'X')

3a. Very long word starting with 'X' (should see X at start):

Xylophonemanufacturersassoc
iationinternationalsymposium

3b. Very long word starting with 'A' (should see A at start):

Antidisestablishmentarianism
hilosophicalperspectives

3c. Very long word starting with 'Z' (should see Z at start):

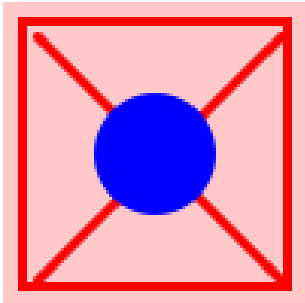

Zylophonemechanicalengineeri
ngspecificationdocument

Test 4: ImageFromPicture Format Support

Issue: PNG format fails on Windows 11, JPEG works

Expected: Both images should be visible and identical

4a. Current platform default (PNG on Desktop/Linux, JPEG on iOS/Web):

SUCCESS: ImageFromPicture worked with platform default

Desktop/Linux: Uses PNG (lossless)

Test 5: MultiCell Positioning After Call

Issue: Cell(ln=1) moves to left margin of NEXT line instead of below current cell
Expected: Next text should appear directly below MultiCell, not offset

5a. MultiCell followed by regular Cell:

MultiCell text here
Second line

Cell after MultiCell (should align)

*Gray vertical line shows expected left alignment
If second box is offset right, bug exists on this platform*

Test Results Summary

Visual Inspection Required:

1. Check Test 1: All single-line MultiCells should have complete borders (especially bottom)
2. Check Test 2: Newline characters should create actual line breaks
3. Check Test 3: Long words should start with X, A, Z (not missing first char)
4. Check Test 4: Image should be visible (red square, blue circle)
5. Check Test 5: Second cell should align with MultiCell left edge

Platform Information:

Platform: macOS (testing cross-platform)

Xojo Version: 2025r2.1 API2

Report Source: Geoff Bridges (Windows 11 user)
